Grounds for reporting hate

Summary

The monitoring period has been greatly influenced by the attack in Algeciras, which has caused a large number of cases of hatred against Muslims, although it is quite recurrent in general. Many cases show signs of xenophobia and racism and it is surprising how popular the theory of the great replacement is. The gypsy people, Unaccompanied Minors and some related to gender are also very present. It is very frequent that the messages reflect multiple intolerance against various groups.
